This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- An approach to construct a target-specific sentiment lexicon is proposed.
- An unsupervised method to extract opinion targets is proposed.
- The method achieves both high accuracy and recall in extraction.
- A framework is proposed to classify sentiment polarities of opinion pairs accurately.
- The framework extracts and integrates different sources of sentiment information.
