Abstract:

Objectives: This study aimed to verify the prevalence of body satisfaction in breast cancer survivors and the association of this variable with overweight, sedentary behavior and physical activity in this population. **Study Design:** This is a cross-sectional study realized in Presidente Prudente - Brazil. **Breast cancer survivors participated in this study. Questionnaires were used to obtain data on socioeconomic status, body dissatisfaction, sedentary behavior and level of physical activity. The association between body dissatisfaction and the independent variables was verified through binary logistic regression in the unadjusted model**
