This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- Population growth and dietary patterns strongly drive national food demand
- Land and water availability are linked with national food demand
- 40% of global pop. will live in countries with not enough land nor water with the BAU scenario in 2050
- Changes in diets is the solution with the strongest impact
