This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Choi and Yi (2009) found evidence that the Internet stimulated economic growth in the 1990-2000 period using cross-country panel data.
- Extending the time period to 2015 gives opposite results.
- For the 1990-2015 period, cross-country panel data regressions indicate negative and significant effects of the Internet on economic growth.
