This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A developed analytical model of bending characteristics for bimetal composite was presented.
- The movement behaviour of bonding interface relative to neutral and unelongated planes was studied.
- Analytical, FE and experimental investigations were conducted on the bending behaviours of bimetal composite.
