This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The hybrid approach allows simulating interaction of a debonded piezoelectric structure with an elastic waveguide.
- The approach is a combination of the boundary integral method and the spectral element method.
- The method suggests combining the two methods at the boundary of a debonded piezoelectric structure.
- The method allows calculating complex-valued eigenfrequencies and performing a detailed parametric analysis.
