This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- A framework is proposed for myocardial infarction delineation.
- The framework has comparable performance to the DE-CMR imaging.
- A hierarchical motion-feature fusion architecture for image sequence is proposed.
- A new feature inference strategy is designed.
