This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

1. New OSC-PSO algorithm that perform consistently across problems of different dimensions.
2. The proper choice of algorithmic parameters is suggested to achieve the desired objective.
3. Particles are driven into oscillatory trajectories to ensure that the search space can be covered more completely.
4. A perturbation on the inertia weight is introduced to further enhance particle coverage and prevent trajectory overlap.
