This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- New spatial discretization of spherical shallow-water equations on triangular grids.
- Preservation of mass, total energy, potential vorticity and potential enstrophy.
- Stationary geostrophic modes are preserved, spurious pressure modes are absent.
- Connection between conservation properties and reconstruction operators established.
