This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Attack probability decreases as the cost of detection increases
- Whereas it increases as the cost of withdrawal increases
- Penetrated state is the most sensitive state with respect to the dependability
- Reliability, availability and confidentiality decrease as the attack rate increases
- Whereas they increase as the rate of intrusion detection increases
