Mechanical, Morphological, and Water Absorption Properties of a New Hybrid Composite Material made from 4 Harness Satin Woven Carbon Fibres and Flax Fibres in an Epoxy Matrix

Zainab Al-Hajaj, Radovan Zdero, Habiba Bougherara

PII: S1359-835X(18)30365-8

DOI: <https://doi.org/10.1016/j.compositesa.2018.09.015>

Reference: JCOMA 5184

To appear in: *Composites: Part A*

Received Date: 20 March 2018

Revised Date: 14 September 2018

Accepted Date: 16 September 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Mechanical, Morphological, and Water Absorption Properties of a New Hybrid Composite Material made from 4 Harness Satin Woven Carbon Fibres and Flax Fibres in an Epoxy Matrix
