This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We explore a mathematical model of multiple myeloma that was presented previously.
- We justify model parameter ranges and values using published data and calculations.
- We use global methods to determine parameters the model is most sensitive to.
- We determine which of those parameters could be estimated from data.
- We numerically explore the behavior of the model over time.
