A Hybrid Iterated Local Search and Variable Neighborhood Descent
Heuristic Applied to the Cell Formation Problem

Ivan C. Martins, Rian G.S. Pinheiro, Fábio Protti, Luiz S. Ochi

PII: S0957-4174(15)00510-2
DOI: [10.1016/j.eswa.2015.07.050](https://doi.org/10.1016/j.eswa.2015.07.050)
Reference: ESWA 10185

To appear in: *Expert Systems With Applications*

Received date: 28 February 2014
Revised date: 21 July 2015
Accepted date: 23 July 2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We propose a new heuristic algorithm for the Cell Formation Problem
- The algorithm is based on Iterated Local Search with Variable Neighborhood Descent
- Our method finds several optimal solutions for benchmark instances from literature
- Our method improves solutions for instances with unknown optimal values
