This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- OU colored noise-induced diffusion of a particle on 2D tilted periodic surface is proposed.
- The huge enhancement is observed than Gaussian noise, $1\sim 2$ amplitude than 1D case.
- The mechanism relies on the correlation of color noise and the 2D tilted periodic surface.
