## Data in Brief

journal homepage: www.elsevier.com/locate/dib

ABSTRACT

Data in this article describes logistics management on construction

sites in Abuja, Nigeria. Data was elicited from 55 construction

professionals comprising of Architects, Builders, Civil Engineers,

Project Managers and Quantity Surveyors. The Data set in this

study consists of responses on: factors affecting material purchase

on construction sites, factors affecting accuracy of material deliv-

ery, challenges encountered during material delivery, benefits of

material delivery on construction sites and methods of forecasting

material demand on construction sites. This article provides

insight into logistics management on construction sites in Nigeria

and it can be a useful guide for similar research in other contexts.
