This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Transformation of local prognoses to be processed by the assessment method.
- Graph modelling for multicomponent system assessment to carry out productive tasks.
- Definition of inferences for patterns of graph modelling.
- Computation of decision supports for production and maintenance management.
- Example to show how the decision supports the method provides can be used.
