This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

HIGHLIGHTS

- In experimental studies, eosinophils promote plasma cell survival and proliferation
- We analyzed eosinophils in bone marrow from patients with plasma cell disorders
- Percentage of eosinophils did not correlate to degree of plasma cell infiltration
- Surface expression of CXCR4/CD184 and CD69 was increased on patients' eosinophils
