Voting with evaluations: characterizations of evaluative voting and range voting \*

Antonin Macé<sup>†</sup>

September 6, 2018

#### Abstract

I conduct an axiomatic analysis of voting rules in a context where voters evaluate each candidate by assigning her an evaluation from a pre-established set. I focus on additive rules, which follow the utilitarian paradigm. Characterization results are provided for each of the two prominent additive rules: Evaluative Voting when the evaluation set is finite and Range Voting when the evaluation set is [0,1]. These results are first obtained in a simple setting of ranking rules - where candidates are compared according to a ranking of their attributes - and are then extended to a more general setting of voting rules.

Keywords: Range Voting, Evaluative Voting, Utilitarianism, Measurement.

JEL classification: D70, D63

\*I would like to thank Raicho Bojilov, Denis Bouyssou, Yukio Koriyama, Jean-François Laslier, François Maniquet, Vincent Merlin, Eduardo Perez, Robert Somogyi, Marjorie Sweetko and Rafael Treibich for useful remarks and comments, as well as participants in the economics seminars at École Polytechnique, ISI Delhi, the University of Warwick, the CORE, Maastricht University, the University of St. Andrews, the University of Manchester, Aix-Marseille School of Economics and in the following conferences: 4th Murat Sertel Workshop, ECORE 2013, Public Economic Theory 2013, Economic Design 2013, Economic Growth and Development 2013, RES 2014 and ADRES 2014. I am very grateful to two reviewers and the editor for their helpful comments on a first version of the manuscript. All remaining errors are mine.
