A solid-state chemical reduction approach to synthesize graphitic carbon nitride with tunable nitrogen defects for efficient visible-light photocatalytic hydrogen evolution

Yizeng Zhang, Junning Gao, Zhiwu Chen

PII: S0021-9797(18)31200-1

DOI: <https://doi.org/10.1016/j.jcis.2018.10.012>

Reference: YJCIS 24167

To appear in: *Journal of Colloid and Interface Science*

Received Date: 29 July 2018

Revised Date: 1 October 2018

Accepted Date: 5 October 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

A solid-state chemical reduction approach to synthesize graphitic carbon nitride with tunable nitrogen defects for efficient visible-light photocatalytic hydrogen evolution
