This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- We examine the effects of US-guided percutaneous electrolysis in subacromial pain syndrome.
- Percutaneous electrolysis was not associated to better outcomes in disability and pressure sensitivity
- Positive findings for some secondary outcome warrant further study.
