Self-Induced Velocity Correction for Improved Drag Estimation in Euler-Lagrange Point-Particle Simulations

S. Balachandar, Kai Liu, Mandar Lakhote

PII: S0021-9991(18)30635-1
DOI: <https://doi.org/10.1016/j.jcp.2018.09.033>
Reference: YJCPH 8280

To appear in: *Journal of Computational Physics*

Received date: 7 May 2018
Revised date: 11 September 2018
Accepted date: 17 September 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Rigorous analytic derivation of self-induced velocity correction in Euler-Lagrange methodology.
- Extension of the low Reynolds number theory to higher Reynolds numbers through numerical simulation.
- A composite velocity correction model that has been tested in the context of falling sphere.
