This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- The art on airflow distribution and management in data center is reviewed.
- Experimental and numerical investigations of several typical cases are summed.
- Energy efficiency of air distribution must base on the reliability of data center.
- HACS is a promising air management system due to its flexibility and extendability.
- Improvement of vertical airflow uniformity needs to be developed.
