

Accepted Manuscript

A versatile small molecular electron donor with 2-dimensional conjugation structure for efficient organic solar cells compatible with both fullerene and non-fullerene electron acceptors

Jae Woong Jung

PII: S0143-7208(18)30915-X

DOI: [10.1016/j.dyepig.2018.08.008](https://doi.org/10.1016/j.dyepig.2018.08.008)

Reference: DYPI 6921

To appear in: *Dyes and Pigments*

Received Date: 23 April 2018

Revised Date: 5 August 2018

Accepted Date: 6 August 2018

Please cite this article as: Jung JW, A versatile small molecular electron donor with 2-dimensional conjugation structure for efficient organic solar cells compatible with both fullerene and non-fullerene electron acceptors, *Dyes and Pigments* (2018), doi: 10.1016/j.dyepig.2018.08.008.

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

A versatile small molecular electron donor with 2-dimensional conjugation structure for efficient organic solar cells compatible with both fullerene and non-fullerene electron acceptors
