This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

***Highlights (for review)**

ACCEPTED MANUSCRIPT

The Highlights of the paper (PHYSA-181299) are as follows.

- We seek community structure in an iterative manner without the use of modularity.
- Alternating between consensus and leader selection unveils community structure.
- The membership of each node is refined naturally via the dynamical evolution.
- The proposed algorithms operate on real-world and synthetic networks.
