American Nurses Foundation (ANF) research grants program

Track record of ANF scholars' research career

## ABSTRACT

The American Nurses Foundation (ANF) grant program has been successful in funding nurse researchers' initial research studies for nearly 60 years. (ANF, 2013). From 1955–2012, over 1,000 ANF scholars have been identified through this historical nursing research study. Over the years, obtaining an ANF grant has become increasingly competitive for scholars. The environment supportive of research is evident from the schools that are the top recipients of grants. The ANF has a proud legacy of scholars who have and continue to make contributions to the advancement of nursing science. The paths forged by the ANF scholars illustrate the significant role that small grant programs play in the evolution of nursing research and the expansion of nursing science.

The American Nurses Foundation (ANF) grant program has been successful in funding nurse researchers' beginning research work, and ANF maintains close working relationships with the National Institute of Nursing Research (NINR) in efforts to nurture young investigators (American Nurses Foundation, 2013). Our historical research efforts in tracking the ANF scholars began with the desire to celebrate ANF's 50th anniversary in 2005 (Holzemer et al., 2005). Holtzclaw (2006) categorized ANF scholar's research as "Early Scholars" (1955–1970), "Models of Excellence" (1970s), "New Avenues" (1980s), and "Crowning the Century" (1990–2004). Holtzclaw (2006) observed an increase in the well-established programs of research that emerged in the 1980s from the ANF awardees due to the establishment of the National Center for Nursing Research (NCNR). In the 1990s, ANF grant applications increased in number due to the moving of NCNR to a full NIH institute in 1993, National Institute of Nursing Research (NINR) with ANF scholars moving quickly from ANF funding to federal funding. These ANF scholars included Dr. Rita Pickler, Dr. Jean McSweeney, Dr. Victoria Mock and Dr. Christine Miaskowski.

We now have identified over 1,000 scholars who received ANF funding, between 1955 and 2012. The ANF Scholars 2005–2012 could be characterized as the "Frontiers of Science" with research focused on genetics, technology, and complex biopsychosocial processes. ANF

scholars have impacted healthcare policy (Messmer & Zalon, 2010). For this study, ANF grants were categorized according to name, topic of grant, year and affiliation at time of receiving the grant.<sup>4</sup> The Tables (1–4) are arranged in tiers (tier I–IV) to identify those universities/colleges/agencies that have been successful in attaining an ANF grant thru the nearly 60 years that the program has been in existence. Table 1 identifies tier I, the top 10 universities having scholars to receive an ANF grant. Table 2 identifies tier II, the next 21 universities/colleges/agencies having scholars to receive the ANF grants. Table 3 identifies tier III the universities who had scholars to receive 3–8 ANF grants. Table 4 identifies tier IV those universities who had scholars to receive 1 or 2 ANF grants.

Over the years, obtaining an ANF grant has become increasingly competitive for scholars. The environment supportive of research is evident from the schools that are the top recipients of grants. For achieving this prestigious award, the top 10 schools to receive ANF grants (grants to doctoral students and faculty are included in the listing) include the University of Pennsylvania with the most grants (45), the University of California at San Francisco (40), Case Western Reserve University (38), University of Illinois at Chicago (28), University of Washington (24), University of Rochester (23), University of Pittsburgh (22), University of North Carolina at Chapel Hill (22), the University of Texas at Austin (18) and the University of Michigan (18). It is interesting to note that this
