A Scheme for High Level Data Classification Using Random Walk and Network Measures

Thiago Henrique Cupertino, Murillo Guimares Carneiro, Qiusheng Zheng, Junbao Zhang, Liang Zhao

PII: S0957-4174(17)30620-6
DOI: [10.1016/j.eswa.2017.09.014](https://doi.org/10.1016/j.eswa.2017.09.014)
Reference: ESWA 11535

To appear in: *Expert Systems With Applications*

Received date: 28 August 2015
Revised date: 17 August 2017
Accepted date: 9 September 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A new network-based classification technique is proposed.
- It considers the structural pattern formation of each data class.
- Physical data features and structural information are combined to characterize data.
- This mixed information improved classification accuracy.
