An active contour model based on local fitted images for image segmentation

Lei Wang, Yan Chang, Hui Wang, Zhenzhou Wu, Jiantao Pu, Xiaodong Yang

PII: S0020-0255(16)30855-6
DOI: [10.1016/j.ins.2017.06.042](https://doi.org/10.1016/j.ins.2017.06.042)
Reference: INS 12964

To appear in: *Information Sciences*

Received date: 12 September 2016
Revised date: 17 March 2017
Accepted date: 29 June 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A novel local fitted image is proposed to approximate the square of the original image based on the LBF and LIF models.
- A novel active contour model is proposed by constructing a local hybrid image fitting energy.
- Segmentation results demonstrate that our model is better than several typical models in terms of accuracy and computational effectiveness.
