This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- State of the art of smart cities' infrastructures is studied
- A customizable simulator to generate thousands of drivers real-time data is proposed
- Performance comparison of two data streaming server models (Ztreamy & Apache Kafka)
- Distributed model solutions for real-time services with limited resources: 5 servers
