This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- Reflections on interdisciplinary collaborations to study social robotics are provided from an experimental psychological viewpoint.
- The value of an experimental approach to explore psychological mechanisms underlying human-human and human-machine interaction is outlined.
- The importance of valid measurement in social robotics is discussed.
- This is illustrated by means of a best-practice example from the author's laboratory.
