This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Software architecture for integration of the existing e-learning system with SLE is proposed.
- Integration of legacy applications and Web based applications using SOA and WSs.
- SLE serves as a bridge between an institutional e-learning system and external tools.
- Diversity of technologies and tools used in the proposed architecture are given.
- SLE supports both formal and informal learning enhanced by technology.
