This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Discussion of stratification problems of the Metropolis algorithm, and showing ways for improvement.
- Discussion of the difficulties of adaptive mutations.
- Proposal of a simple mutation strategy to improve the stratum of samples and thus reducing the integration error. We come to the conclusion after theoretical analysis that it is worth reducing the mutation size where the current sample is of high importance, which also makes sense intuitively.
- Analysis and visualization of the method in 2D.
- The application of the sampling method in 3D global illumination rendering.
