This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A system for the visual analysis of soccer matches based on the spatiotemporal position of players;
- A matrix-oriented design that allows displaying the position of players and tactical schemes throughout the match;
- A visual summarization using pathline glyphs of the player trajectories that started from a given region in the field;
- Evaluation of the visual design by soccer experts.
