Second-order Stochastic Dominance Constrained Portfolio Optimization: Theory and Computational Tests

Markku Kallio, Nasim Dehghan Hardoroudi

PII: S0377-2217(17)30626-4
DOI: [10.1016/j.ejor.2017.06.067](https://doi.org/10.1016/j.ejor.2017.06.067)
Reference: EOR 14549

To appear in: *European Journal of Operational Research*

Received date: 19 December 2016
Revised date: 23 June 2017
Accepted date: 30 June 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A self-contained theory is offered for stochastic dominance constrained optimization
- Directional second order stochastic dominance is proposed as a novel relaxation
- Computational efficiency of alternative stochastic dominance formulations is tested
