This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We describe the oligopolistic behavior of cement producers in an international market;
- Each producer's problem is formulated as a Mathematical Program with Equilibrium Constraints;
- Producers' interactions are studied with an Equilibrium Problem with Equilibrium Constraints;
- The problem is linearized and transformed into a Mixed Integer Linear Programming model;
- We study the impact of costs, capacity and demand fluctuation through a parametric analysis.
