An Iterated Greedy Heuristic for a Market Segmentation Problem with Multiple Attributes

Diana L. Huerta-Muñoz, Roger Z. Ríos-Mercado, Rubén Ruiz

PII: S0377-2217(17)30119-4
DOI: [10.1016/j.ejor.2017.02.013](https://doi.org/10.1016/j.ejor.2017.02.013)
Reference: EOR 14250

To appear in: *European Journal of Operational Research*

Received date: 1 October 2014
Revised date: 25 January 2017
Accepted date: 9 February 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- An Iterated Greedy heuristic for a real-world market segmentation problem is proposed
- Greedy randomized construction phase enhances performance of classical K-means method
- Method is enhanced by variable neighborhood search within an iterated greedy framework
- Segmentation plans obtained by the proposed procedure improve current firm plans
- Proposed heuristic is found competitive, faster and more robust than existing methods
