This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- We apply scenario decomposition to two-stage and multi-stage unit commitment models
- Dual stabilisation and initialisation are included for rapid convergence
- A novel schedule combination heuristic is used to construct good primal solutions
- Numerical results on a model of Britain demonstrate the effectiveness of the method
