Improved Local Binary Pattern for Real Scene Optical Character Recognition

Chu-Sing Yang , Yung-Hsuan Yang

PII: S0167-8655(17)30260-X
DOI: [10.1016/j.patrec.2017.08.005](https://doi.org/10.1016/j.patrec.2017.08.005)
Reference: PATREC 6886

To appear in: *Pattern Recognition Letters*

Received date: 10 December 2016
Revised date: 9 May 2017
Accepted date: 6 August 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We improve Local Binary Pattern into a robust edge descriptor.
- Improved Local Binary Pattern have capability to overcome noise and blur.
- We use integral image to speed up procedure of feature creation.
- Rounded distance between center pixel to its neighbor is suitable in OCR.
- It will higher recognition rate instead Gaussian filter by box filter.
