This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A novel and effective sample selection method is proposed.
- The condensed nearest neighbor rule is optimized based on k-means clustering algorithm in the proposed method.
- The proposed method could select discriminative training samples for classification.
- Appropriate quantity and quality of training samples could improve the accuracy and prevent overfitting of CNN.
