This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- A necessary and sufficient condition for achieving scaled consensus of multiagent systems with output saturation is first provided under the undirected graph or the strongly connected graph.
- we extend the existing results of the scaled consensus to the more practical scenario with output saturation.
