Two-phase flow pattern identification in a tube bundle based on void fraction and pressure measurements, with emphasis on churn flow

F. de Kerret, C. Béguin, S. Etienne

PII: S0301-9322(16)30392-5
DOI: [10.1016/j.ijmultiphaseflow.2017.04.013](https://doi.org/10.1016/j.ijmultiphaseflow.2017.04.013)
Reference: IJMF 2581

To appear in: *International Journal of Multiphase Flow*

Received date: 6 July 2016
Revised date: 19 April 2017
Accepted date: 19 April 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Two-phase flow regim map concurrent pressure and optical probes flow regimes with emphasis on churn flow
