This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Initial value problems of autonomous linear and nonlinear fractional order systems are formulated for commensurate and incommensurate fractional order cases.
- Several sufficient conditions for the asymptotic stability criteria of linear systems are formulated.
- A theorem for the local stability of the equilibrium points of nonlinear system is proposed.
- The stabilization criteria of autonomous nonlinear fractional order systems via linear feedback control technique is proposed.
- Asymptotic stability and stabilization of equilibrium points of fractional order Lorenz system are discussed.
- Some analytical conditions for the asymptotic stabilization of fractional order Lorenz system are given.
