Effects of Growth Stress in Finite-Deformation Thermally Grown Oxide on Failure Mechanism of Thermal Barrier Coatings

Q. Shen , L. Yang , Y.C. Zhou , Y.G. Wei , W. Zhu

PII: S0167-6636(16)30321-0
DOI: [10.1016/j.mechmat.2017.08.011](https://doi.org/10.1016/j.mechmat.2017.08.011)
Reference: MECMAT 2789

To appear in: *Mechanics of Materials*

Received date: 14 September 2016
Revised date: 11 June 2017
Accepted date: 22 August 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A finite deformation growth stress and TGO evolution model is developed;
- TGO evolution and stress distributions is investigated based on the developed model by finite element method;
- The interface roughness is a significant factor to influence the stress state and TGO growth.
