Existence of Share Equilibrium in Symmetric Local Public Good Economies*

A. van den Nouweland[†] and M. Wooders[‡]

May 30, 2017

Abstract

Share equilibrium was introduced in van den Nouweland and Wooders (2011) as an extension of Lindahl's original equilibrium concept (Lindahl, 1919) to local public good economies. The current paper contains a comprehensive study of the possible share equilibrium outcomes of symmetric individuals, exposing the forces that shape equilibrium and explaining the circumstances under which symmetric individuals can potentially have different equilibrium share indices. We provide an existence result for symmetric economies and a characterization of symmetric economies that admit share equilibria. We also establish equivalence between share equilibrium configurations in symmetric economies and core configurations in which the players all have the same utility.

*We are grateful to the referees and the associate editor for their careful reading of the paper and for their constructive feedback. We are grateful to Nizar Allouch, Nick Baigent, Jean-Marc Bonnisseau, Bernard Cornet, Shlomo Weber and other participants at several presentations of this work for stimulating comments. We are also grateful to the Douglas Grey Fund for Research in Economics at Vanderbilt University for financial support
