Multifractal detrended fluctuation analysis of intensity time series of photons scattered by tracer particles within a polymeric gel

Luciano Telesca, Catalina Haro-Pérez, L. Rebeca Moreno-Torres, Alejandro Ramirez-Rojas

PII: S0378-4371(17)30803-8

DOI: <http://dx.doi.org/10.1016/j.physa.2017.08.080>

Reference: PHYSA 18526

To appear in: *Physica A*

Received date: 20 March 2017

Revised date: 1 June 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- 1) DLS allows obtaining sequences of elapsed times of scattered photons
- 2) Two sequences of photons scattered by the same scattering volume are obtained
- 3) By integration of these sequences, the intensity time series are obtained
- 4) The intensity time series for both sequences are antipersitent
- 5) The intensity time series for both sequences are multifractal
