This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

We presented an exclusive queueing model including the choice of service windows.

The way of choosing service windows, strategy, affects the transit times strongly.

The optimal floor length and number of service windows were obtained.

The transit time increases monotonically as the entrance block rate increases.
