Synthesis and characterization of a novel inorganic-organic hybrid material based on polyoxometalates and dicyclohexylcarbodiimide

Bo Huang, Xiaokang Hu, Xunliang Hu, Nan Wang, Kang Yang, Zicheng Xiao, Pingfan Wu

PII: S0022-2860(17)31034-7

DOI: [10.1016/j.molstruc.2017.07.088](https://doi.org/10.1016/j.molstruc.2017.07.088)

Reference: MOLSTR 24115

To appear in: *Journal of Molecular Structure*

Received Date: 1 March 2017

Revised Date: 25 July 2017

Accepted Date: 26 July 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

A new inorganic-organic hybrid material based on polyoxovanadates and DCC was synthesized and characterized, which may open a new way to design POM-based hybrid materials towards bulky molecules and molecular machines.
