This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Synthesis of cuprous sulfide nanoparticles anchored graphene for enhanced capacitive energy storage

Z.J. Li, B.C. Yang*, X.W. Lv, Y.C. Li, L. Wang

Highlights

- Cu₂S/graphene hybrids were synthesized by a simple method.
- Cu₂S/graphene hybrids showed improving electrochemical properties.
- The nanocomposites are promising candidates for supercapacitors.
