This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- ▶ Five open and cyclic carbene bases are electron pair donors to four ClX acids.
- ▶ Complexes with ClCCH and ClCN are stabilized by traditional halogen bonds.
- ▶ Chlorine transfer occurs in carbene complexes with ClNC and ClF.
- ▶ These complexes are stabilized by ion-pair $\text{Cl}^+\cdots\text{NC}$ and $\text{Cl}^+\cdots\text{F}$ halogen bonds.
- ▶ Consistent descriptions are given by bonding indexes and coupling constants.
