Comprehensive Utilization of Shrimp Waste Based on Biotechnological Methods:
A Review

Xiangzhao Mao, Na Guo, Jianan Sun, Changhu Xue

PII: S0959-6526(16)32097-2
DOI: 10.1016/j.jclepro.2016.12.042
Reference: JCLP 8617
To appear in: *Journal of Cleaner Production*

Received Date: 27 October 2016
Revised Date: 08 December 2016
Accepted Date: 10 December 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Quantities of solid waste are generated by shrimp processing industries.
- Shrimp waste is recognized as an abundant resource of bioactive compounds.
- Overview of the comprehensive utilization of shrimp waste in recent years is summarized.
- The new environmentally friendly and cleanly biotechnological methods are reported.
- Future challenges and trends in comprehensive utilization of shrimp waste are prospected.
