

## Accepted Manuscript

Title: No impact of repeated extinction exposures on operant responding maintained by different reinforcer rates

Authors: John Y.H. Bai, Christopher A. Podlesnik

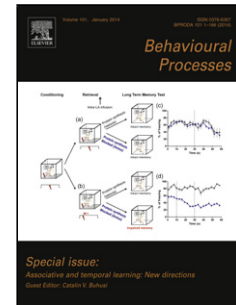

PII: S0376-6357(16)30415-6  
DOI: <http://dx.doi.org/doi:10.1016/j.beproc.2017.02.011>  
Reference: BEPROC 3389

To appear in: *Behavioural Processes*

Received date: 18-12-2016  
Revised date: 14-2-2017  
Accepted date: 14-2-2017

Please cite this article as: Bai, John Y.H., Podlesnik, Christopher A., No impact of repeated extinction exposures on operant responding maintained by different reinforcer rates. *Behavioural Processes* <http://dx.doi.org/10.1016/j.beproc.2017.02.011>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

No impact of repeated extinction exposures on operant responding maintained by different reinforcer rates

**Highlights:**

- Resistance to extinction was greater with greater reinforcement rates in a multiple schedule
- This pattern persisted across twelve repeated tests of extinction and resembled satiation tests
- More dynamic training and testing could reverse these effects
